A detailed social history of childbirth examines the physical, political, social, religious, and anthropological factors that influence how women bring new life into the world, examining such topics as why birth can be difficult, how women have handled pain, the role of men during childbirth, and other important topics. Reprint.

"[An] engrossing survey of the history of childbirth." —Stephen Lowman, Washington Post Making and having babies—what it takes to get pregnant, stay pregnant, and deliver—have mystified women and men throughout human history. The insatiably curious Randi Hutter Epstein journeys through history, fads, and fables, and to the fringe of science. Here is an entertaining must-read—an enlightening celebration of human life.

An "engaging and enlightening" (The Wall Street Journal) argument that innovation and progress are often achieved by revisiting and retooling ideas from the past rather than starting from scratch—from Guardian columnist and contributor to The Atlantic, Stephen Poole. Innovation is not always as innovative as it may seem. Rethink is the story of how old ideas that were mocked or ignored for centuries are now storming back to the cutting edge of science and technology, informing the way we lead our lives. This is the story of Lamarck and the modern-day epigeneticist whose research vindicated his mocked two hundred-year-old theory of evolution; of the return of cavalry use in the war in Afghanistan; of Tesla 's bringing back the electric car; and of the cognitive scientists who made breakthroughs by turning to ancient Greek philosophy. "An anecdote-rich tour through the centuries" (The New York Times), with examples from business to philosophy to science, Rethink shows what we can learn by revisiting old, discarded ideas and considering them from a novel perspective. From within all these rich anecdotes of overlooked ideas come good ones, helping us find new ways to think about ideas in our own time—including out-of-the-box proposals in the boardroom to grand projects for social and political change. "Clever and entertaining...a thoughtful and thought-provoking book" (The Sunday Times, London), Rethink helps you see the world differently. Armed with this picture of the surprising evolution of ideas and their triumphant second lives, and in the bestselling tradition of Malcolm Gladwell, Poole 's new approach to a familiar topic is fun, convincing, and brilliant—and offers a clear takeaway: if you want to affect the future, start by taking a look at the past.

An urgent examination into the revived Klan of the 1920s becomes "required reading" for our time (New York Times Book Review). Extraordinary national acclaim accompanied the publication of award-winning historian Linda Gordon 's disturbing and markedly timely history of the reassembled Ku Klux Klan of the 1920s. Dramatically challenging our preconceptions of the hooded Klansmen responsible for establishing a Jim Crow racial hierarchy in the 1870s South, this "second Klan" spread in states principally above the Mason-Dixon line by courting xenophobic fears surrounding the flood of immigrant "hordes" landing on American shores. "Part cautionary tale, part expose" (Washington Post), The Second Coming of the KKK "illuminates the surprising scope of the movement" (The New Yorker); the Klan attracted four-to-six-million members through secret rituals, manufactured news stories, and mass "Klonvocations" prior to its collapse in 1926—but not before its potent ideology of intolerance became part and parcel of the American tradition. A "must-read" (Salon) for anyone looking to understand the current moment, The Second Coming of the KKK offers "chilling comparisons to the present day" (New York Review of Books).

Ghostbelly is Elizabeth Heineman 's personal account of a home birth that goes tragically wrong—ending in a stillbirth—and the harrowing process of grief and questioning that follows. It 's also Heineman 's unexpected tale of the loss of a newborn: before burial, she brings the baby home for overnight stays. Does this sound unsettling? Of course. We 're not supposed to hold and caress dead bodies. But then again, babies aren 't supposed to die. In this courageous and deeply intimate memoir, Heineman examines the home-birth and maternal health-care industry, the isolation of midwives, and the scripting of her own grief. With no resolution to sadness, Heineman and her partner learn to live in a new world: a world in which they face each day with the understanding of the fragility of the present.

The history of African American Studies is often told as a heroic tale, with compelling images of black power and passionate African American students who refuse to take "no" for an answer. Noliwe M. Rooks argues for the recognition of another story that proves that many of the programs that survived were actually begun due to heavy funding from the Ford Foundation or, put another way, as a result of white philanthropy. Today, many students in African American Studies courses are white, and an increasing number of black students come from Africa or the Caribbean, not the United States. This shift—which makes the survival of the discipline contingent on non-African American students—means that "blackness can mean everything and, at the same time, nothing at all." While the Ford Foundation provided much-needed funding, its strategies, aimed at addressing America's "race problem," have left African American Studies struggling to define its identity in light of the changes it faces today. With unflinching honesty, Rooks shows that the only way to create a stable future for African American Studies is through confronting its complex past.

Describes the author's loving relationship with a rescued dog and his observations about how today's pet dogs are treated with considerably more care than in past generations, exploring the dog's complex and prominent place in the world while assessing related issues about animal rights and ethics. 40,000 first printing.

In this "heroic narrative" (The Wall Street Journal), discover the inspiring and timely account of the complex relationship between leading suffragist Alice Paul and President Woodrow Wilson in her fight for women 's equality. Woodrow Wilson lands in Washington, DC, in March of 1913, a day before he is set to take the presidential oath of office. He is surprised by the modest turnout. The crowds and reporters are blocks away from Union Station, watching a parade of eight thousand suffragists on Pennsylvania Avenue in a first-of-its-kind protest organized by a twenty-five-year-old activist named Alice Paul. The next day, The New York Times calls the procession "one of the most impressively beautiful spectacles ever staged in this country." Mr. President, How Long Must We Wait? weaves together two storylines: the trajectories of Alice Paul and Woodrow Wilson, two apparent opposites. Paul 's procession of suffragists resulted in her being granted a face-to-face meeting with President Wilson, one that would lead to many meetings and much discussion, but little progress for women. With no equality in sight and patience wearing thin, Paul organized the first group to ever picket in front of the White House lawn—night and day, through sweltering summer mornings and frigid fall nights. From solitary confinement, hunger strikes, and the psychiatric ward to ever more determined activism, Mr. President, How Long Must We Wait? reveals the courageous, near-death journey it took, spearheaded in no small part by Alice Paul 's leadership, to grant women the right to vote in America. "A remarkable tale" (Kirkus Reviews) and a rousing portrait of a little-known feminist heroine, this is an eye-opening exploration of a crucial moment in American history one century before the Women 's March.
