other services; Create services and applications that accept external configuration; Explore ways to secure ASP.NET Core microservices and applications

Building Microservices with ASP.NET Core: Develop, Test ...

Creating an ASP.NET Core Application Solution. Open the Visual Studio and add a new project. Choose the application as ASP.NET Core Web Application and give it a meaningful name. Next, choose API as the type of the project and make sure that “ Enable Docker Support ” option is selected with OS type as Linux. The solution will look as shown below.

Microservices Using ASP.NET Core - C# Corner

Building microservices with ASP.NET Core (without MVC) There are several reasons why it makes sense to build super-lightweight HTTP services (or, despite all the baggage the word brings, “ microservices ”). I do not need to go into all the operational or architectural benefits of such approach to system development, as it has been discussed a lot elsewhere.

Building microservices with ASP.NET Core (without MVC ...

Building Microservices Using ASP.NET Core Microservices are small, modular approach to create small services that can run on its own process. Traditional monolithic style application architecture has already coupled all their functionalities into one service. Please enable Javascript to correctly display the contents on Dot Net Tricks!

Building Microservices Using ASP.NET Core

ASP.NET Core is a collection of small, modular components that can be plugged into your application to let you build web applications and microservices. Within ASP.NET Core you will find APIs for routing, JSON serialization, and rigging up MVC controllers and views. Historically, ASP.NET came with the .NET Framework—you could not separate the two.

1. ASP.NET Core Primer - Building Microservices with ASP ...

Description. You will learn how to build Microservices on .Net platforms which used Asp.Net Web API, Docker, RabbitMQ, Ocelot API Gateway, MongoDB, Redis, SqlServer, Entity Framework Core, CQRS and Clean Architecture implementation. You will develop e-commerce modules over Product, Basket and Ordering microservices with NoSQL (MongoDB, Redis) and Relational databases (Sql Server) with communicating over RabbitMQ Event Driven Communication and using Ocelot API Gateway.

Microservices Architecture and Implementation on .NET Core ...

Implement microservice monitoring using ASP.NET Core Healthchecks. Healthchecks is an in-built middleware in ASP.NET Core for reporting the health of an application. Healthchecks can be exposed as one more endpoint in the application. Install healthchecks packages. Using package manager console install the required packages for healthchecks
