If you are interviewing with a company, you are likely qualified for the job. Through the mere action of conducting the interview, the employer essentially implies this. So why is it difficult to secure the job you love? Because there are three reasons you actually get the job—none of which are your qualifications—and, unfortunately, you can only control one of them. iINTERVIEW INTERVENTION creates awareness of these undetected reasons that pose difficulty for the job-seeker and permeate to the interviewer, handicapping the employer's ability to secure the best talent. It teaches interview participants to use effective interpersonal communication techniques aimed at overcoming these obstacles. It guides job-seekers through the entire interview process to ensure they get hired. It teaches interviewers to extract the most relevant information to make sound hiring decisions. iINTERVIEW INTERVENTION will become your indispensable guide to: ? Create self-awareness to ensure you understand the job you want before—not after—the fact. ? Conduct research to surface critical employer information. ? Share compelling stories that include the six key qualities that make them believable and memorable. ? Respond successfully to the fourteen most effective interview questions. ? Sell yourself and gather intelligence through effective question asking. ? Close the interview to ensure the interviewer wants to hire you.

Technology-Enhanced Systems and Tools for Collaborative Learning Scaffolding is a major research theme in CSCL and CSCW research community. This book presents up-to-date research approaches for developing technology-enhanced systems and tools to support functional online collaborative learning and work settings. It comprises a variety of research topics that span from the study of frameworks and infrastructures that foster collaborative learning and work through the application of different methods (distributed e-learning repositories, content creation and customization, social networks, collaborative ontologies building, and educational games) to the use of personalization and adaptation techniques to support the development of more powerful e-collaboration settings, including methodologies and tools for analyzing students' interactions with the aim to increase students' collaborative behaviors, performance and group organization. Researchers will find in this book the latest trends in these research topics, which gives them the opportunity to deepen further on the above issues and to extend their knowledge to other areas. Academics will find practical insights on how to use conceptual and experimental approaches in their daily tasks. Developers from CSCL community can be inspired and put in practice the proposed models and evaluate them for the specific purposes of their own work and context.

The all-new annual edition of this comprehensive and authoritative guide to colleges contains descriptions supplied by over 3,100 two- and four-year colleges and universities.
