Financial Accounting for Management: An Analytical Perspective focuses on the analysis and interpretation of financial information for strategic decision making to enable students and managers to formulate business strategies for revenue enhancement, cost economies, efficiency improvements, restructuring of operations, and further expansion or diversification for creating and enhancing the shareholder's value. MBA, MFC and MBE students are its primary audience but its practical orientation will also be useful to corporate sector managers and CA, CWA, CS, CFA and CAIIB students.

The first course in finance for finance and business majors has traditionally focused solely on managerial (or corporate) finance. Now, many schools are indicating a need to introduce these students -- particularly the non-finance business majors -- to the other two major components of finance -- institutions and investments -- in this first course but at the same level of rigot as traditional financial management texts. The Dryden Press has answered this call with Principles of Finance. This text begins with a discussion of the principles of financial systems and business organizations, moves on to valuation concepts, and then corporate decision making (managerial finance). It concludes with coverage of investment fundamentals. Key chapters may be covered in a one-term course or supplemented with cases and outside readings for a two-term course. Chapters are written in a flexible, modular format, allowing instructors to cover the material in a different sequence if desired.

Over the last 50 years, human activities - particularly the burning of fossil fuels - have released sufficient quantities of carbon dioxide and other greenhouse gases to trap additional heat in the lower atmosphere and addict the global climate in the last 130 years, the world has warmed by approximately 0.85oC. Each of the last 3 decades has been successively warmer than any preceding decade since 1850. The seas levels are rising glaciers are melting and precipitation patterns are changing. Extreme weather events are becoming more intense and frequent. Although global warming may bring some localized benefits, such as fewer winter deaths in temperate climates and increased food production in certain areas, the overall health effects of changing climate are likely to be overwhelmingly negative. Climate change affects social and environmental determinants of health - clean air, safe drinking water, sufficient food and secure shelter.

This—revised and enhanced—book examines the role of finance in supporting other functional areas while fostering an understanding of how financial decisions can create value. Corporate Finance covers areas related to estimating divisional cost of capital; executing a financing strategy; establishing debt and dividend policies consistent with the company's strategy and environment; choosing between dividends and stock repurchases; managing high growth and managing working capital. Its new topics include: - Corporate Financial Flexibility (Real options) - New Financial Instruments - Project Finance - Acquisitions and Control - Performance Measurement and Incentive Compensation The goal of this book is to provide a thorough understanding of how and why firms make their financial decisions the way they do and their impact on shareholder value. The central theme of the book is Value Based Management, which assumes that maximizing shareholder value is the governing objective of a firm. Each chapter of this new edition has detailed and real-life cases to help students easily understand and grasp concepts. The author has also provided the case-map of the Harvard Business School to make this book more user-friendly in classrooms. The inclusion of several new topics/cases, extensive pedagogical tools and a finance-for-non-finance approach make this book ideal for MBA/CA/CFA/ICWA students and executive education programs.
