### Cheshire Roof Trusses

- Timber as material, used to carry roof loads in a structural truss arrangement
- Timber trusses are made up by connecting single wood pieces meeting at a pin joint with a bolt or a nail joining the pieces
- Pin Joints rotate and trusses become non mono-planar which causes load path eccentricity
-

# Acces PDF

## Howe Timber

Mono-planar trusses were considered to centralise load path by use of gusset plates and multimember trusses, with more bolts at joints to allow truss to carry bending load and not rotate at joints
