From a journalist on the frontlines of the Students for Fair Admission (SFFA) v. Harvard case comes a probing examination of affirmative action, the false narrative of American meritocracy, and the attack on Asian American excellence with its far-reaching implications—from seedy test-prep centers to gleaming gifted-and-talented magnet schools, to top colleges and elite business, media, and political positions

across America. Even in the midst of a nationwide surge of bias and incidents against them, Asians from coast to coast have quietly assumed mastery of the nation's technical and intellectual machinery and become essential American workers. Yet, they've been forced to do so in the face of policy proposals written in the name of diversity, excluding them from the upper ranks of the elite. In *An Inconvenient Minority*, journalist Kenny Xu traces elite America's longstanding unease about a minority potentially upending them. Leftist agendas, such as eliminating standardized testing, doling out racial advantages to "preferred" minorities, and lumping Asians into "privileged" categories despite their deprived historical experiences have spurred Asian Americans to act. Going beyond the *Students for Fair Admission (SFFA) v. Harvard* case, Xu unearths the skewed logic rippling countrywide, from Mayor Bill de Blasio's attempted makeover of New York City's Specialized School programs to the battle over "diversity" quotas in Google's and Facebook's progressive epicenters, to the rise of Asian American activism in response to unfair perceptions and admission practices. Asian Americans' time is now, as they increase their direct action and amplify their voices in the face of mounting anti-Asian attacks. *An Inconvenient Minority* chronicles the political and economic repression and renaissance of a long ignored racial identity group and how they are central to reversing America's cultural decline and preserving the dynamism of the free world.

Today's super high-performance bikes are the most potent vehicles ever sold to the public and they demand advanced riding skills. This is the perfect book for riders who want to take their street riding skills to a higher level. *Total Control* explains the ins and outs of high-performance street riding. Lee Parks, one of the most accomplished riders, racers, authors and instructors in the world, helps riders master the awe-inspiring performance potential of modern motorcycles. This book gives riders everything they need to develop the techniques and survival skills necessary to become a proficient, accomplished, and safer street rider. High quality photos, detailed instructions, and professional diagrams highlight the intricacies and proper techniques of street riding. Readers will come away with a better understanding of everything from braking and cornering to proper throttle control, resulting in a more exciting yet safer ride.

Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular *Race Tech Suspension Seminars*, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.

The Triumph Bonneville has been one of motorcycling's most enduring British icons. The name comes from the Utah salt flats where a streamlined twin-cylinder Triumph captured the World Motorcycle Speed Record in 1956. In 1959, the first Bonneville, the T120, appeared, and the Bonneville name would remain a revered badge of motorcycling honor for the following three decades. This elegant, picture-lavish book, featuring Bonneville's specially photographed in a studio setting, pays tribute by showing all the classic models in exquisite photographic detail, accompanied by an expert commentary. A visual feast for all Bonneville enthusiasts.

This book examines the manufacturing, supply chain and product-level sustainability of leather and footwear products. This book deals with the environmental and chemical sustainability aspects

pertaining to the tanning supply chain and the related mitigation measures. The book also explores interesting areas of leather and footwear sustainability, such as waste & the 3R's and their certification for sustainability. At the product level, the book covers advanced topics like the circular economy and blockchain technology for leather and footwear products and addresses innovation development and eco-material use in footwear by investigating environmental sustainability and the use of bacterial cellulose, a potential sustainable alternative for footwear and leather products.

This book provides state of the art scientific and engineering research findings and developments in the field of humanoid robotics and its applications. It is expected that humanoids will change the way we interact with machines, and will have the ability to blend perfectly into an environment already designed for humans. The book contains chapters that aim to discover the future abilities of humanoid robots by presenting a variety of integrated research in various scientific and engineering fields, such as locomotion, perception, adaptive behavior, human-robot interaction, neuroscience and machine learning. The book is designed to be accessible and practical, with an emphasis on useful information to those working in the fields of robotics, cognitive science, artificial intelligence, computational methods and other fields of science directly or indirectly related to the development and usage of future humanoid robots. The editor of the book has extensive R

This book is an anthology of motorcycle stories. These 50 stories were submitted to me over a 13-year period by a wide range of motorcyclists from all walks of life. These authors tell their own personal stories of what happened to them as they rode their motorcycles. Among these writers are a few professionals who made some of their works available to me early in their careers. They now have books of their own. Some tales are very short, and some are very long. I've tried to mix them up. You may find the stories of some authors grouped together. Each tale was intensively edited to provide a good reader experience. You'll find humor, risk-taking, adventures, poetry, rhyming verse, 2-up excursions, world travelers, stupid tricks on bikes, lessons learned, winter riding perils, hazards while riding, and stories told by returning riders. I wrote five of these stories. Two of my stories relate my experiences on my motorcycle trips. Two stories are fictional children's stories that involve fantasy and motorcycles. The last story is a short fictional tale that describes an alternate world of motorcycles. Got a better original tale? Send it to me for consideration in a possible sequel.
