Stabilizing your RV - How To RV: Camping WorldHow to correct a RV Leveling System Jack Error Lippert Electric Stabilizer Jack System

NOTE - The Lippert Electric Rear Stabilizer Jack is designed to operate as a negative ground system. A negative ground system utilizes the chassis frame as a ground and an independent ground wire back to battery is necessary (see page 9 for wiring diagram). It is important that the electrical components have good wire to chassis contact. Electric Stabilizer Jacks by Lippert Description After a long trip, cranking manual scissor jacks can be a long and strenuous process.

Lippert Stabilizer Jack Wiring Diagram

With electric power, the Power Tongue Jack lifts an RV with ease with just the flip of the switch. The Power Tongue Jack features helical cut gears that reduce noise and improve operating efficiencies, and includes four LED lights, making camp setup simple and easy, day or night.

Electric Stabilizer | Lippert Customer Support

There are a couple potential reasons why the back Lippert Power Jack # LC298707 on your trailer won't extend or retract even with the motor running. It's possible that it may have been over-extended or something internally has been stripped or bent. Try using the manual crank on the jack to see if it's able to operate in this manner.

Troubleshooting Lippert Power Jack Not Extending or ...

The patented six-point Level Up® hydraulic leveling system levels an RV in less than a minute using a one-touch auto-leveling feature, and includes an auto re-hitch memory function that remembers the exact height at which the RV was unhitched.

From high-tech recreational vehicle products to trailblazing social initiatives, Lippert Components, Inc. is leading the way. We are the nation's leading supplier of components to the recreational vehicle industry.

RV Leveling System & Power Gear Parts - Lippert Components

It is possible the Replacement 6-Amp Auto Reset Breaker for Lippert Components Power Stabilizer Jack # LC134181 has gone bad, but it could also be that the motor is pulling too much power from being overloaded and is tripping the breaker in order to protect the motor. I recommend trying to manually extend the jack to see if it has been overextended and then checking the power components again.
