Kantor says that it's important to remember that education is expensive, so it's a good idea to get started as early as possible and save as much as possible. At a minimum, you should aim to have saved up one year of your child's school fees before they start school so that you can pay upfront for the year and benefit from the discount that almost all schools offer for early payment.

Secondary education is thus regarded as a passport for higher education. Hence the main defect of secondary education is its aimlessness. Secondary education must have definite aims related to practical life and the secondary schools should try to realise those aims in every possible manner.

Many introductory texts claim to make sociology relevant to student interests. Perhaps no other text has done this so completely - and engagingly - as Connecting Sociology to Our Lives. Tim Delaney not only uses popular and contemporary culture examples, he explains sociology thoroughly within the frame of the contemporary culture of students - a culture shaped by political, economic, and environmental trends just as much as by today's pop stars. This book will help academics to engage their students in sociology through the prism of their own culture. It involves students in critical thinking and classroom discussion through the book's many "What Do You Think?" inserts, and will inspire them to careers with the book's unique chapter, 'Sociology's Place in Society: Completing the Connection'.

Arguing for life, moral and values education as a bedrock for the original goals of school education, this monograph explores how life and values education is conceptualised and imparted in Greater China. Under a globalized, transnational, and technological world, where there has been an increase in people's mobility, in information and cultural exchanges, there is also a growing emphasis on personal and professional ethics. Against this context, life, moral and values education has gained attention for its impact on shaping students' characters as future citizens. However, the cultivation of these values is made deeply diversified and complex by varying interpretations of "life education" and "values education" across societies, given that different societies are influenced by different socio-cultural traditions, educational ideologies and religious beliefs. The means and approaches towards life education also vary vastly from formal school subjects, school-based programmes as well as teachers and peers' role modelling, community services, extra-curricular activities, school discipline, charity work, pastoral care, and school ethos. Recognising this inherent diversity and complexity in the approach to and the dissemination of life education, the contributors to this volume survey the practice of life education in Greater China so far, suggesting that life education is most effective when it is "diversified, dynamic and developmental across contexts". This book will provide the opportunity for engaging in important and serious debates about the future and the values that will underpin it and will prove of special interest to scholars and practitioners working on education policies curriculum development and teacher education in Greater China.

[This book merits every American's serious consideration!] (Vice President Joe Biden): from the Secretary of Education under President Obama, an exposé of the status quo that helps maintain a broken system at the expense of our kids' education, and threatens our nation's future. Education runs on lies. That's probably not what you'd expect from a former Secretary of Education, but it's the truth. So opens Arne Duncan's How Schools Work, although the title could just as easily be How American Schools Work for Some, Not for Others, and Only Now and Then for Kids. Drawing on nearly three decades in education—from his mother's after-school program on Chicago's South Side to his tenure as Secretary of Education in Washington, DC How Schools Work follows Arne (as he insists you call him) as he takes on challenges at every turn: gangbangers in Chicago housing projects, parents who call him racist, teachers who insist they can't help poor kids, unions that refuse to modernize, Tea Partiers who call him an autocrat, affluent white progressive moms who hate yearly tests, and even the NRA, which once labeled Arne the "most extreme anti-gun member of President Obama's Cabinet." Going to a child's funeral every couple of weeks, as he did when he worked in Chicago, will do that to a person. How Schools Work exposes the lies that have caused American kids to fall behind their international peers, from early childhood all the way to college graduation rates. But it also identifies what really does make a school work. As insightful as it is inspiring! (Washington Book Review), How Schools Work will embolden parents, teachers, voters, and even students to demand more of our public schools. If America is going to be great, then we can accept nothing less.

Americans have long recognized that investments in public education contribute to the common good, enhancing national prosperity and supporting stable families, neighborhoods, and communities. Education is even more critical today, in the face of economic, environmental, and social challenges. Today's children can meet future challenges if their schooling and informal learning activities prepare them for adult roles as citizens, employees, managers, parents, volunteers, and entrepreneurs. To achieve their full potential as adults, young people need to develop a range of skills and knowledge that facilitate mastery and application of English, mathematics, and other school subjects. At the same time, business and political leaders are increasingly asking schools to develop skills such as problem solving, critical thinking, communication, collaboration, and self-management - often referred to as "21st century skills." Education for Life and Work: Developing Transferable Knowledge and Skills in the 21st Century describes this important set of key skills that increase deeper learning, college and career readiness, student-centered learning, and higher order thinking. These labels include both cognitive and non-cognitive skills- such as critical thinking, problem solving, collaboration, effective communication, motivation, persistence, and learning to learn. 21st century skills also include creativity, innovation, and ethics that are important to later success and may be developed in formal or informal learning environments. This report also describes how these skills relate to each other and to more traditional academic skills and content in the key disciplines of reading, mathematics, and science. Education for Life and Work: Developing Transferable Knowledge and Skills in the 21st Century summarizes the findings of the research that investigates the importance of such skills to success in education, work, and other areas of adult responsibility and that demonstrates the importance of developing these skills in K-16 education. In this report, features related to learning these skills are identified, which include teacher professional development, curriculum, assessment, after-school and out-of-school programs, and informal learning centers such as exhibits and museums.
