This page on GSM SDCCH Vs. SACCH describes difference between SDCCH and SACCH channels used in GSM technology. Both the channels fall under signaling logical channel category. Both are dedicated control channel. They both are used in uplink as well as downlink direction. Both are carried by normal burst structure.

GSM SDCCH vs SACCH | difference between SDCCH and SACCH in GSM
SDCCH Dimensioning/Immediate Assignment on TCH:In case of this feature on the channel administration assigns TCH forsignaling instead of an SDCCH, based on 7 different channelsallocation strategies (CHAPs)TCH first strategy : Decreases the SDCCH load and enable to use SDCCH/4 in all the cells Traffic load on TCH will in this case increases substantially so this strategy is not recommended.SDCCH first strategy : SDCCH is always allocated first if available, otherwise signaling is performed on TCH.

About | sdchh
Call from Mobile Station to land line: 1. MS after dialing a number and press send key uses RACH to ask for a signaling channel. 2. The BSC allocates a signaling channel, using AGCH. 3. The MS sends a call setup request through SDCCH, to the MSC/VLR. Over SDCCH, all signaling takes place. This includes:...
